PLASTIC SURGERY

DESCRIPTION

PEPTIDE PT-141 (also called bremelanotide) is a peptide that works on the brain's pathways to help increase sexual desire and arousal. Unlike other therapies that affect blood flow, PT-141 works on the nervous system, which means it can be effective for both men and women in improving libido and sexual satisfaction. Injection Site: Use an alcohol swab on the top of the vial and at the site of injection before use. Work in a clockwise fashion around the belly button to ensure the prior injection sites have healed, avoiding tender areas. Other subcutaneous area shown to the left.

PT-141

Per prescription

99% PURITY

BENEFITS

Improves sexual desire and arousal, enhances satisfaction, and supports sexual wellness for both men and women. *Discontinue concurrent use of PDE-5 medications (Viagra, Cialis, etc.)
