

PEPTIDE

TIRZEPATIDE

Ocean
PLASTIC SURGERY

DESCRIPTION

Tirzepatide is a peptide designed for weight management and appetite control. It operates by targeting multiple pathways in the body, including both GLP-1 and GIP receptors. These pathways regulate appetite and blood sugar levels, respectively. By mimicking the actions of these hormones, tirzepatide helps to reduce appetite and increase feelings of fullness, getting rid of unwanted cravings.

TIRZEPATIDE

Per prescription

99% PURITY

BENEFITS

Supports weight management, appetite control, and metabolic health as part of your personalized plan.

SIDE EFFECTS

It is important that you follow the dose and administration instructions as listed. You may experience site injection reactions, nausea, indigestion and possible constipation after your injection. If any of these symptoms become severe, contact us and let the medical team know. If you feel like your current dose is not effective, or you are not losing weight, please contact the clinic to adjust your treatment plan accordingly.

IMPORTANT

-  **1-6 months until goal weight achieved**
Cycle
-  **AM or PM**
Timing
-  **Once per week**
Frequency
-  **See dose instructions on your plan**
Dose / route
-  **Refrigerate**
Storage

INJECTION SITE

Use an alcohol swab on the top of the vial and at the site of injection before use. Work in a clockwise fashion around the belly button to ensure the prior injection sites have healed, avoiding tender areas. Other subcutaneous area shown to the left.
